

# MALARIA FREE ZONE PROJECT

1. Malaria is not contagious from one person directly to another person.

2. Malaria is spread with the help of a mosquito.

3. The Mosquito can spread Malaria only if it first picks up the Malaria parasite by biting a person sick with Malaria.

OK✓

4. **SOLUTION:** To avoid getting Malaria people need to make sure there are no mosquitoes in their homes, offices, and places indoor.

OK✓

5. **SOLUTION:** If you think you have Malaria go to the hospital. All wards shall separate the sick and non sick patients from mosquitoes.

OK✓

6. **DO THIS:** In your home cover any opening such as windows, doors, and holes in walls and ceiling with old, expired mosquito bed nets.

OK✓

7. **DO THIS:** Store water only in buckets closed with a fitting lit, because mosquitoes multiply in buckets of water.
